## FETTLING BENCHES

- We manufacture a standard 1500mm wide fettling bench that over the years has been used for a wide variety of applications including the fettling of components, the cleaning out of cabinets by means of compressed air, the tipping out of spent printer toner cartridges, etc.
- Although 1500mm is our standard width dimension, we can accommodate any size of bench size or design including that of a low profile design where the enclosure is a floor standing three sided unit that caters for larger components. In addition, items such as dust proof lights, acoustic lining, integral dust control units, mounting plates for turntables and vices, anti scratch plastic bench tops, etc can all be accommodated into the design.
